

## Telekom CR-facts

### **Calliope Mini - a mini-computer for young schoolchildren**

The [Calliope Mini](#) [1] mini-computer helps young schoolchildren learn how to program a computer. In 2017, Calliope gGmbH provided pilot schools in the states of Saarland and North Rhine-Westphalia with mini-computers. The Deutsche Telekom Stiftung foundation supports the project by developing and testing learning materials and course concepts. Ideas for the creative use of digital technology are currently being worked on at six universities within the scope of the "Elementary school digital learning" project.
