Telekom CR-facts

Internet access on planes

Together with satellite company Inmarsat, Deutsche Telekom is offering the fastest inflight broadband service for European travelers.

The European Aviation Network (EAN) has been developed by Inmarsat and Deutsche Telekom in partnership with leading European companies such as Thales, Nokia, Airbus, Cobham and EAD Aerospace. It marks a paradigm shift in the airline passenger experience, with incomparable speeds, uninterrupted coverage and significantly lower latency than any other inflight Wi-Fi network in the continent.

The award-winning connectivity solution is currently available with three different airlines. Since entering commercial service in March this year, it has been available to over 7.5 million passengers travelling on more than 55,000 flights throughout Europe, covering key destinations such as London, Madrid, Barcelona, Geneva and Rome.
