## **The Internet of Things**

Machines and products are constantly becoming smarter. The technologies that make these developments possible are bundled under the term Internet of Things, or IoT.

IoT can help ideally coordinate the processes of various devices, vehicles, and entire industrial facilities. This increases industrial productivity and ensures efficient logistics, thus helping reduce energy consumption and conserve resources.

We also support the German federal government's Industry 4.0 initiative through our involvement in IoT. The initiative's objective is to maintain Germany's competitive edge in the technology sector.
