Telekom CR-facts

CDP Reporting

Deutsche Telekom annually reports to the CDP questionnaires 'Climate Change' and 'Supply Chain Program'. CDP, formerly the Carbon Disclosure Project, runs a global disclosure system that enables companies, cities, states and regions to measure and manage their environmental impacts.

In 2022, we once again made it onto the “A List” of CDP’s most important international climate protection ranking – one of just 288 companies worldwide to do so out of more than 15 000 that were scored.

We’re working closely together with our suppliers to reduce our carbon footprint during the manufacturing and usage phases of our products, too. For the fifth time, CDP has awarded us the title of “Supplier Engagement Leader” in recognition of our achievements. Out of 18 600 participating companies, more than 650 made it onto the Supplier Engagement Leaderboard.

Our annual reporting on Deutsche Telekom`s climate performance through CDP's global disclosure system:
